### **DETAILED ACTION**

1. According to paper filed on Sep. 18, 2007, the applicants have elected group II without traverse for further prosecution.
2. Claims 11-18 are pending in the application.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 11-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The following eight different factors (see *Ex parte Foreman*, 230 USPQ at 547; *Wands*, *In re*, 858.F. 2d 731, 8 USPQ 2d 1400, Fed. Cir. 1988) must be considered in order for the specification to be enabling for what is being claimed:

Quantity of experimentation necessary, the amount of direction or guidance provided, presence or absence of working examples, the nature of the invention, the state of the prior art, the relative skill of those in the art, the predictability or unpredictability and the breadth of claims. In the instant case, the specification is not enabling based on at least four of the above mentioned eight different factors such as quantity of experimentation necessary, the amount of direction or guidance provided, presence of working examples, state of the prior art, unpredictability and the breadth of claims.

Art Unit: 1625

The instant composition claims are directed to using the instant composition for any type of tumor. However, the specification on pages 16-25 teaches antitumor effects of these complexes on adenocarcinoma, leukemia, melanoma and sarcoma only. There is no teaching in the specification or prior art regarding specific mechanism of action of such compounds. There is no teaching in the specification or prior art that compounds having efficacy for treating adenocarcinoma, leukemia, melanoma and sarcoma tumors are well known to have therapeutic utility for treating every type of known tumor in the art. There are numerous types of tumors and therefore, in absence of such teachings, it would require undue experimentation to demonstrate the efficacy of instant complex in every known tumor in the art and hence their pharmaceutical utility for using such compositions.

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 11-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 11-16, the term --- An antitumor composition ---- is vague and indefinite since specific tumors are not defined. The applicants are suggested to change the term to --- A pharmaceutical -----.

7. Claims 11-18 are objected for containing non-elected subject matter.

***Allowable Subject Matter***

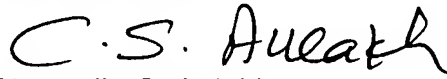

8. The following is a statement of reasons for the indication of allowable subject matter:

Claims 17 and 18 are allowable over the prior art since the instant metal complexes are neither disclosed nor obvious over the prior art. In the prior art, Laurie ( Aust. J. Chem. ) discloses Cobalt complexes of phenylalanine ( see table 1 on page 681 ) which are closely related to instant complexes. However, the complexes of Laurie differ from the instant complexes in having unsubstituted phenylalanine instead of 4-[bis(2-chloroethyl)amino]-phenylalanine and furthermore, there is no teaching or suggestion in the prior art to modify the complexes of Laurie to prepare the instant metal complexes.
